Q 1. Two sound sources are moving in opposite directions with velocities $v_{1}$ and $v_{2}\left(v_{1}>\right.$ $v_{2}$ ). Both are moving away from a stationary observer. The frequency of both the sources is 900 Hz . What is the value of $v_{1}-v_{2}$ so that the beat frequency observed by the observer is 6 Hz ? Speed of sound $v=300 \mathrm{~m} / \mathrm{s}$. [Given that $v_{1}$ and $v_{2} \ll v$ ]
(a) $1 \mathrm{~m} / \mathrm{s}$
(b) $2 \mathrm{~m} / \mathrm{s}$
(c) $3 \mathrm{~m} / \mathrm{s}$
(d) $4 \mathrm{~m} / \mathrm{s}$

Q 2. A sound wave of frequency $n$ travels horizontally to the right with speed $c$. It is reflected from a broad wall moving to the left with speed $v$. The number of beats heard by a stationary observer to the left of the wall is

Observer
(b) $\frac{n(c+\mathrm{v})}{c-\mathrm{v}}$ (c) $\frac{n \mathrm{v}^{2}}{c-\mathrm{v}}$
(d) $\frac{2 n v}{c-v}$

Q 3. Two sources $S_{1}$ and $S_{2}$ of same frequency $f$ emits sound. The sources are moving as shown with speed $u$ each. A stationary observer hears that sound. The beat frequency is $(v=$ speed of sound $)$

(a) $\frac{2 u^{2} f}{v^{2}-u^{2}}$
(b) $\frac{2 v^{2} f}{v^{2}-u^{2}}$
(c) $\frac{2 u v f}{v^{2}-u^{2}}$
(d) $\frac{2 u f}{v}$

Q 4. A man moving towards a vertical cliff at a constant velocity of $u \mathrm{~m} / \mathrm{s}$, fires a gun and hears the echo after $t$ seconds. If he was at a distance of $d$ meters from the cliff when he fired the gun, then the velocity of sound in air in $\mathrm{m} / \mathrm{s}$ is
(a) $\frac{2 d}{t}$
(b) $\frac{2 d}{t}+u$
(c) $\frac{2 d}{t}-u$
(d) $\frac{d}{t}$

Q 5. A sound source is moving with speed $50 \mathrm{~m} / \mathrm{s}$ towards a fixed observer. Frequency observed by observer is 1000 Hz . Find out apparent frequency observed by observer when source is moving away from observer (Speed of sound $=350 \mathrm{~m} / \mathrm{s}$ )
(a) 750 Hz
(b) 950 Hz
(c) 550 Hz
(d) 350 Hz

Q 6. With what velocity an observer should move relative to a stationary source so that he hears a sound of double the frequency of source
(a) Velocity of sound towards the source
(b) Velocity of sound away from the source
(c) Half the velocity of sound towards the source
(d) Double the velocity of sound towards the source

Q 7. A motor cycle starts from rest and accelerates along a straight path at $2 \mathrm{~m} / \mathrm{s}^{2}$. At the starting point of the motor cycle, there is a stationary electric siren. How far has the motor cycle gone when the driver hears the frequency of the siren at $94 \%$ of its value when the motor cycle was at rest?
(Speed of sound $=330 \mathrm{~m} / \mathrm{s}$ )
(a) 49 m
(b) 98 m
(c) 147 m
(d) 196 m

Q 8. An observer standing at station observers frequency 219 Hz when a train approaches and 184 Hz when train goes away from him. If velocity of sound in air is $340 \mathrm{~m} / \mathrm{s}$, then velocity of train and actual frequency of whistle will be
(a) $15.5 \mathrm{~m} / \mathrm{s}, 200 \mathrm{~Hz}$
(b) $19.5 \mathrm{~m} / \mathrm{s}, 205 \mathrm{~Hz}$
(c) $29.5 \mathrm{~m} / \mathrm{s}, 200 \mathrm{~Hz}$
(d) $32.5 \mathrm{~m} / \mathrm{s}, 205 \mathrm{~Hz}$

Q 9. A bus driving at $39.6 \mathrm{~km} / \mathrm{h}$ is approaching a person who is standing at the bus stop, while honking repeatedly at an interval of 30 seconds. If the speed of the sound is 330 $\mathrm{m} / \mathrm{s}$, at what interval will the person hear the horn?
(a) 31 sec
(b) 29 sec
(c) 30 sec
(d) interval depends on distance between bus \& passenger

Q 10. A source of light emitting wavelength $\lambda=600 \mathrm{~nm}$ is moving away from the observer at a speed close to $1 / 5^{\text {th }}$ the speed of light in vacuum. When observed, what will be wavelength perceived for the source?
(a) 490 nm
(b) 735 nm
(c) 684 nm
(d) 637 nm

Q 11. An observer is revolving in a circular orbit of a radius $r$ with time period $T$. A sound source is at a distance $d$ from the center of circle. If the velocity of the sound is $\mathrm{x} \mathrm{m} / \mathrm{s}$, then the difference between the maximum \& minimum frequencies received by this observer ( n is original frequency)
(a) $\frac{2 \pi n r}{x T}$
(b) $\frac{2 \pi n r x}{T}$
(c) $\frac{4 \pi n x}{r T}$
(d) $\frac{4 \pi n r}{x T}$

Q 12. An engine is moving on a circular path of radius 100 meter with a speed of 20 meter per second. The frequency observed by an observer standing stationary at the center of circular path when the engine blows a whistle of frequency 500 Hz is
(a) More than 500 Hz
(b) Less than 500 Hz

(c) 500 Hz
(d) no sound is heard

Q 13. A supersonic jet is moving with a velocity twice that of sound, the angle of conical wave front produced by the jet will be
(a) $120^{\circ}$
(b) $90^{\circ}$
(c) $60^{\circ}$
(d) $30^{\circ}$

Q 14. A source and an observer move away from each other with a velocity of $10 \mathrm{~m} / \mathrm{s}$ with respect to ground. If the observer finds the frequency of sound coming from the source as 1950 Hz , then actual frequency of the source is (velocity of sound in air $=340 \mathrm{~m} / \mathrm{s}$ )
(a) 1950 Hz
(b) 2068 Hz
(c) 2132 Hz
(d) 2486 Hz

Q 15. A jet plane flies through air with a velocity of 2 Mach. While the velocity of sound is 332 mis, the air speed of the plane is
(a) $166 \mathrm{~m} / \mathrm{s}$
(b) $66.4 \mathrm{~m} / \mathrm{s}$
(c) $332 \mathrm{~m} / \mathrm{s}$
(d) $664 \mathrm{~m} / \mathrm{s}$

Q 16. A star is moving away from an observer with a speed of $500 \mathrm{~km} / \mathrm{s}$. Calculate the Doppler shift if the wavelength of light emitted by the star is $6000 \AA$.
(a) $6 \AA$
(b) $5 \AA$
(c) $30 \AA$
(d) $10 \AA$

Q 17. The apparent wavelength of light from a star moving away from earth is observed to be $0.01 \%$ more than its real wavelength. The velocity of star is
(a) $120 \mathrm{~km} / \mathrm{s}$
(b) $90 \mathrm{~km} / \mathrm{s}$
(c) $60 \mathrm{~km} / \mathrm{s}$
(d) $30 \mathrm{~km} / \mathrm{s}$

Q 18. Earth is moving towards a fixed star with a velocity of $30 \mathrm{~km} / \mathrm{s}$. An observer on earth observes a shift of $0.58 \AA$ in wavelength of light coming from star. What is the actual wavelength of light emitted by star?
(a) $5800 \AA$
(b) $8500 \AA$
(c) $6300 \AA$
(d) $7800 \AA$
