Q 1. A man standing on a road hold his umbrella at $30^{\circ}$ with the vertical to keep the rain away. He throws the umbrella and starts running at $10 \mathrm{~km} / \mathrm{hr}$. He finds that raindrops are hitting his head vertically, the speed of raindrops with respect to the road will be:
(a) $10 \mathrm{~km} / \mathrm{hr}$
(b) $20 \mathrm{~km} / \mathrm{hr}$
(c) $30 \mathrm{~km} / \mathrm{hr}$
(d) $40 \mathrm{~km} / \mathrm{hr}$

Q 2. Rain is falling with a speed of $12 \sqrt{2} \mathrm{~m} / \mathrm{s}$ at angle of $45^{\circ}$ with the vertical line. A man in glider going at a speed of $u$ at an angle of 370 with respect to the ground Find the speed of the glider so that rain appears to him falling yertically. Consider the motion of the glider and rain drops in the same vertical plane:

(a) $15 \mathrm{~m} / \mathrm{s}$
(b) $30 \mathrm{~m} / \mathrm{s}$
(e) $10 \mathrm{~m} / \mathrm{s}$
(d) $20 \mathrm{~m} / \mathrm{s}$

Q 3. A man is walking due east at the rate of $2 \mathrm{~km} / \mathrm{h}$. The rain appears to him to come down vertically at the rate of $2 \mathrm{~km} / \mathrm{h}$. The actual velocity and angle through which rain is falling with the vertical respectively are
(a) $2 \sqrt{2} \mathrm{~km} / \mathrm{h}, 45^{\circ}$
(b) $\frac{1}{\sqrt{2}} \mathrm{~km} / \mathrm{h}, 30^{0}$
(c) $2 \mathrm{~km} / \mathrm{h}, 0^{0}$
(d) $2 \mathrm{~km} / \mathrm{h}, 90^{0}$

Q 4. When a man moves down the inclined plane with a constant speed $5 \mathrm{~m} / \mathrm{s}$ which makes an angle of $37^{\circ}$ with the horizontal, he finds that the rain is falling vertically downward. When he moves up the same inclined plane with the same speed, he finds that the rain makes an angle $\theta=\tan ^{-1}\left(\frac{7}{8}\right)$ with the horizontal. The speed of the rain is:
(a) $\sqrt{116} \mathrm{~m} / \mathrm{s}$
(b) $\sqrt{32} \mathrm{~m} / \mathrm{s}$
(c) $5 \mathrm{~m} / \mathrm{s}$
(d) $\sqrt{73} \mathrm{~m} / \mathrm{s}$

Q 5. A stationary person observes that rain is falling vertically down at $30 \mathrm{~km} / \mathrm{hr}$. A cyclist is moving up on an inclined plane making an angle $30^{\circ}$ with horizontal at $10 \mathrm{~km} / \mathrm{hr}$. In what direction should the cyclist hold his umbrella to prevent himself from rain?
(a) At an angle $\tan ^{-1}\left(\frac{\sqrt{2}}{7}\right)$ with the vertical.

(b) At an angle $\tan ^{-1}\left(\frac{\sqrt{3}}{7}\right)$ with the horizontal
(c) At an angle $\tan ^{-1}\left(\frac{\sqrt{3}}{7}\right)$ with the vertical
(d) At an angle $\tan ^{-1}\left(\frac{\sqrt{2}}{7}\right)$ with the horizontal

Q 6. Rain is falling vertically downwards with a speed of $4 \mathrm{~km} / \mathrm{h}$. A girl moves on a straight road with a velocity of $3 \mathrm{~km} / \mathrm{h}$. The apparent velocity of rain with respect to the girl is:
(a) $3 \mathrm{~km} / \mathrm{h}$
(b) $4 \mathrm{~km} / \mathrm{h}$
(c) $5 \mathrm{~km} / \mathrm{h}$
(d) $7 \mathrm{~km} / \mathrm{h}$

Q 7. A man is cycling at $4 \mathrm{~m} / \mathrm{s}$ On a horizontal rod. To him, rain appears to fall at $30^{\circ}$ from vertical. If he doubles his velocity, rain appears to fall at $60^{\circ}$ to vertical. Find the velocity of the rain:
(a) $4 \mathrm{~m} / \mathrm{s}$
(b) $5 \mathrm{~m} / \mathrm{s}$
(c) $6 \mathrm{~m} / \mathrm{s}$
(d) $4 \sqrt{3} \mathrm{~m} / \mathrm{s}$

Q 8. A man running on a horizontal road at $8 \mathrm{~km} / \mathrm{h}$ finds the rain falling vertically. He increases his speed to $12 \mathrm{~km} / \mathrm{h}$ and finds that the drops make angle $30^{\circ}$ with the vertical. Angle of velocity of rain with vertical is:
(a) $\tan ^{-1}\left(\frac{2}{\sqrt{3}}\right)$
(b) $\tan ^{-1}\left(\frac{\sqrt{3}}{2}\right)$
(c) $\tan ^{-1}\left(\frac{\sqrt{5}}{3}\right)$
(d) $\cos ^{-1}\left(\frac{\sqrt{3}}{2}\right)$

Q 9. A man holds an umbrella at $30^{\circ}$ with the vertical to keep himself dry. Then he runs at a speed of $10 \mathrm{~m} / \mathrm{s}$, and find the raindrops to be hitting vertically. Study the following statements and find the correct options?
(1) Velocity of rain w.r.t. Earth is $20 \mathrm{~m} / \mathrm{s}$
(2) Velocity of rain w.r.t. man is $10 \sqrt{3} \mathrm{~m} / \mathrm{s}$
(3) Velocity of rain w.r.t. Earth is $30 \mathrm{~m} / \mathrm{s}$
(4) Velocity of rain $m . r . t$. man is $10 \sqrt{2} \mathrm{~m} / \mathrm{s}$
(a) Statement (2) and (3) are correct.
(b) Statement (1) and (2) are correct.
(c) Statement (3) and (4) are correct.
(d) Statement (2) and (4) are correct.

Q 10. The path of one projectile as seen from another projectile is a:
(a) Straight line
(b) Parabola
(c) Hyperbola
(d) Circle

## Answer Key
