

SIR PRATEEK JAIN

- IIT JEE & NEET Faculty (KOTA)
- Top Physics Faculty on Unacademy.
- 8+ years of teaching experience
- Research work with HC Verma sir at IIT Kanpur
- Produced ranks like AIR 6, AIR 10 etc.

NEET

Physics DPP

DPP-1 Plane Mirror, Real, Virtual, Rotation of Image, Velocity of Image

By PRATEEK JAIN SIR

Q) When reflection from a plane mirror incident ray, normal & reflected ray all are

(a) In same plane

(b) mutuallu perpendicular

(c) Parallel

(d) None of the above

Join Unacademy PLUS Referral Code :

Physicslive

Ans. a

all are Co-Planer,

Q) A rays is incident at an angle 38° with the normal on a mirror. The angle between normal and reflected ray is

(a) 38°

(b) 52°

(c) 90°

(d) 76°

Join Unacademy PLUS Referral Code :

Physicslive

Ans. a

$$i = r$$

$$i = 38$$

so, $r = 38$

Q) The image of a real object formed by a plane mirror is:

- (a) Erect, real and of equal size
- (b) Erect, virtual and of equal size
- (c) Inverted, real and of equal size
- (d) Inverted, virtual and of equal size

Join Unacademy PLUS Referral Code :

Physicslive

Ans. b

Erect
virtual
equal size

Q) Mark the correct options:

- (a) If the incident rays are converging, we have a real object.
- (b) If the final rays are converging, we have a real image.
- (c) The image of a virtual object is called a virtual image.
- (d) If the image is virtual, the corresponding object is called a virtual object.

Join Unacademy PLUS Referral Code :

Physicslive

Ans. b

R.O. (diverging)

R.I. (converging)

Q) A point source of light is placed in front of a plane mirror:

- (a) All the reflected rays meet at a point when produced backward.
- (b) Only the reflected rays close to the normal meet at a point when produced backward.
- (c) Only the reflected rays making a small angle with the mirror, meet at a point when produced backward.
- (d) Light of different colours make different images.

Join Unacademy PLUS Referral Code :

Physicslive

Ans. a

all reflected
ray meet at
a point when
produced backward

Q) Which of the following is not the case with image formed by a plane mirror:

- (a) It is erect
- (b) It is virtual
- (c) It is diminished
- (d) It is at the same distance as the object

Join Unacademy PLUS Referral Code :

Physicslive

Ans. c

Image formed by a

Plane Mirror: \rightarrow erect

\rightarrow virtual

\rightarrow at same distance
as object

$\&$ \rightarrow same size.

Q) A small object is 10 cm in front of a plane mirror. A man stands 30 cm from the mirror, behind the object and looks at the object's image. He should focus his eyes to see the image at a distance:

(a) 25 cm

(b) 35 cm

(c) 45 cm

(d) 40 cm

Join Unacademy PLUS Referral Code :

Physicslive

Ans. d

$$d = 30 + 10 = 40 \text{ cm},$$

Q) An object is initially at a distance of 50 cm from a plane mirror. If the mirror approaches the object at a speed of 5 cm/s. Then after 5 s the distance between the object and its image will be :

(a) 60 cm

(b) 140 cm

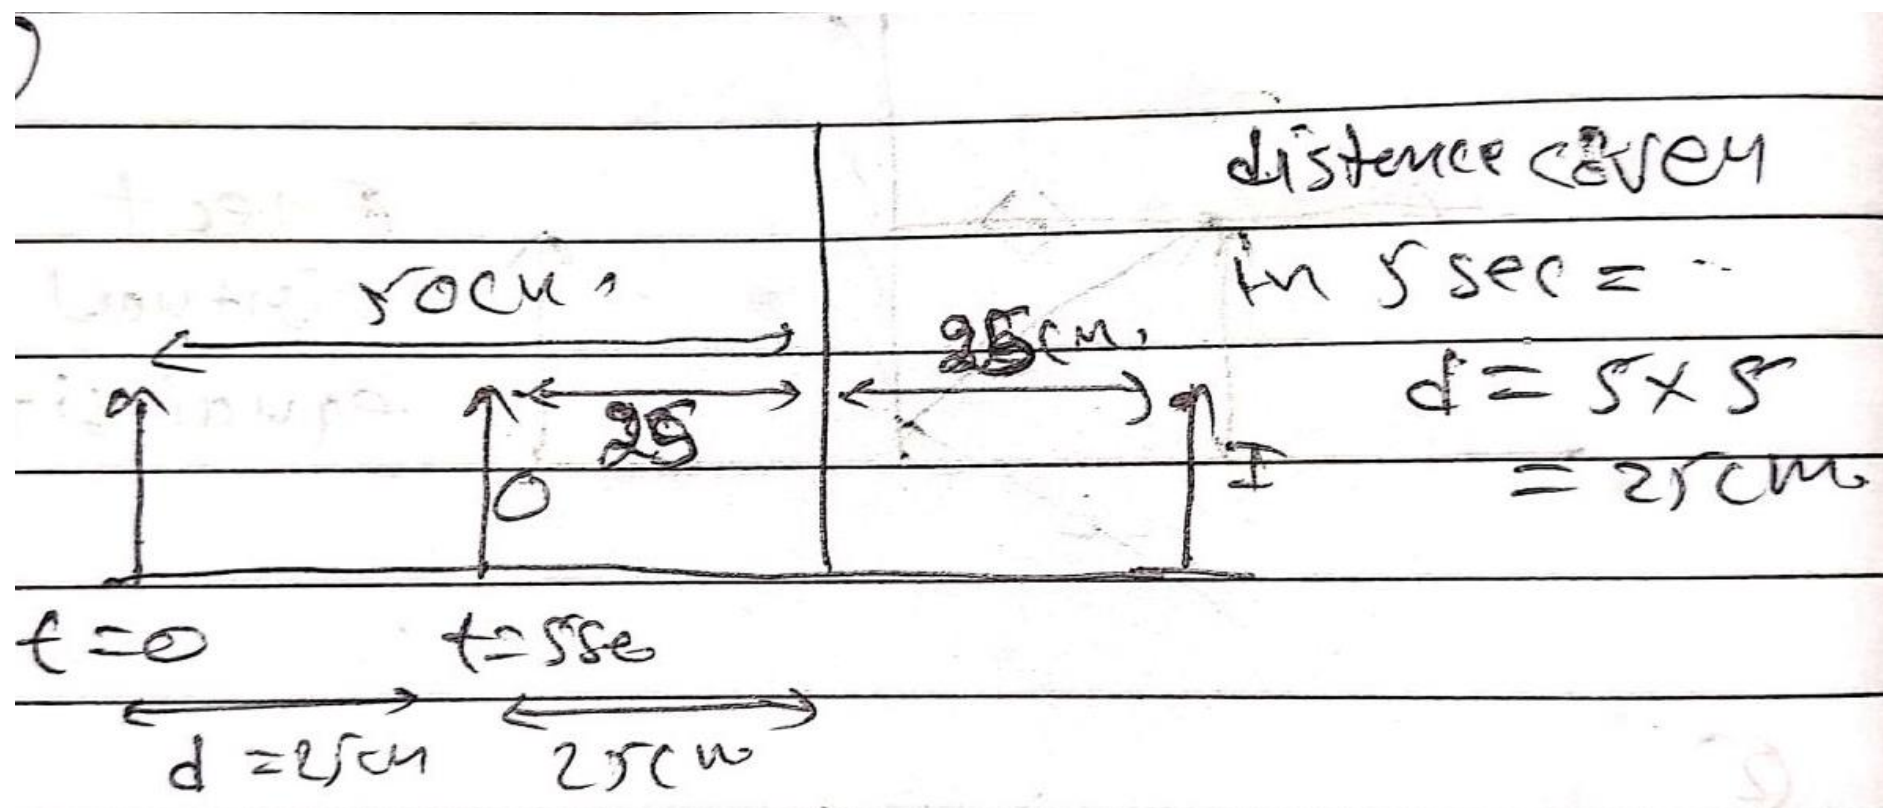

(c) 50 cm

(d) 25 cm

Join Unacademy PLUS Referral Code :

Physicslive

Ans. c

$$D = 25 + 25 = 50\text{ cm}$$

↳ distance between object and

Image at $t = 5\text{ sec}$,

Q) A plane mirror is approaching you at 10 cm per second. You can see your image in it. At what speed will your image approach you:

(a) 10 cm/s

(b) 5 cm/s

(c) 20 cm/s

(d) 15 cm/s

Join Unacademy PLUS Referral Code :

Physicslive

Ans. c

$$V_{M/O} = 10 \text{ cm/sec.}$$

$$V_{I/O} = 2 V_{M/O}$$

$$= 20 \text{ cm/s}$$

$$2d = (d-u) + (d-u) + y$$

$$y = 2u$$

⇒ when ~~object~~ ^{MIRROR} moves (u) then
image moves ($2u$)

∴ when mirror moves with speed v
the image moves with speed $2v$

Q) A car is moving towards a plane mirror at a speed of 30 m/s. Then the relative speed of its image with respect to the car will be-

- (a) 30 m/s (b) 60 m/s (c) 15 m/s (d) 45 m/s

Join Unacademy PLUS Referral Code :

Physicslive

Ans. b

$v_{o/m}$ = speed of object
w.r.t. mirror

$v_{i/m}$ = speed of Image
w.r.t. mirror

$$\vec{v}_{o/m} = -\vec{v}_{i/m}, = 30 \text{ m/s}$$

~~$$\vec{v}_{o/m} = \vec{v}_{i/m}$$~~

$$\vec{v}_{i/o} = \vec{v}_{i/m} - \vec{v}_{o/m}$$

$$= -30 \text{ m/s} - 30 \text{ m/s} = -60 \text{ m/s}$$

$$|\vec{v}_{i/o}| = 60 \text{ m/s}$$

Q) Calculate the velocity of image with respect to observer if an observer is walking away from the plane mirror with 6 m/s:

(a) 6 m/s

(b) -6 m/s

(c) 12 m/s

(d) 3m/s

Join Unacademy PLUS Referral Code :

Physicslive

Ans. c

$$V_{I/O} = V_D - V_0$$

$$= 6 \text{ m/s} + 6 \text{ m/s}$$

$$= 12 \text{ m/s}$$

Q) A light ray is incident on a plane mirror at angle 30° . If mirror is rotated by 10° then reflected ray is rotated by angle

(a) 30°

(b) 10°

(c) 20°

(d) 60°

Join Unacademy PLUS Referral Code :

Physicslive

Ans. c

when mirror is

rotated by angle = θ

then reflected Ray

is rotated by = 2θ

then $\theta = 10^\circ$

$2\theta = 20^\circ$

Q) A light ray is incident on a horizontal plane mirror at an angle of 30° with horizontal. At what angle with horizontal must a plane mirror be placed in its path so that it becomes vertically upwards after reflection?

(a) 30°

(b) 10°

(c) 20°

(d) 60°

Join Unacademy PLUS Referral Code :

Physicslive

Ans. a

⇒ Now Reflected Ray (vertical)

mirror

$$i + \gamma + 30^\circ = 90^\circ$$

$$i + \gamma = 60^\circ$$

$$i = \gamma = 30^\circ$$

Now

$$\alpha + 30^\circ + i = 90^\circ$$

$$\alpha = 30^\circ$$

~~α = 30°~~

Chalo Niklo
