- Q 1. The internal energy of an ideal gas depends upon  
(a) Specific volume (b) Pressure  
(c) Temperature (d) Density
- Q 2. The internal energy of gases He,  $O_2$  and  $NH_3$  are plotted against the absolute temperature. The respective graphs 1, 2 and 3 are of

- (a) He,  $O_2$  and  $NH_3$  (b)  $NH_3$ , He, and  $O_2$   
(c)  $NH_3$ ,  $O_2$  and He (d)  $O_2$ , He, and  $NH_3$
- Q 3. In changing the state of thermodynamics from A to B state, the heat required is Q and the work done by the system is W. The change in its internal energy is  
(a)  $Q + W$  (b)  $Q - W$   
(c) Q (d)  $\frac{Q-W}{2}$
- Q 4. For a gaseous system find change in internal energy if the heat supplied to the system is 50 J and work done by the system is 16 J  
(a) 66 J (b) 50 J  
(c) 34 J (d) 16 J
- Q 5. For a gaseous system, change in internal energy ( $\Delta U$ ) and work done on the system are respectively 17 J and 41 J. find heat supplied / evolved from the system.  
(a) 24 J supplied to system (b) 24 J evolved from system  
(c) 57 J supplied to system (d) 57 J evolved from system
- Q 6. The first law of thermodynamics is concerned with the conservation of  
(a) Momentum (b) Energy

- (c) Mass (d) Temperature

- Q 7. The ratio of translational and rotational kinetic energies at 100 K temperature is 3:2. Then the internal energy of one mole gas at that temperature is ( $R = 8.3 \text{ J/mol-K}$ )(Neglecting all vibrational modes)
- (a) 1175 J (b) 1037.5 J  
(c) 2075 J (d) 4150 J
- Q 8. Find total internal energy of 3 moles of hydrogen gas at temperature 'T' (Neglecting all vibrational modes)
- (a) 7.5 RT (b) 15 RT  
(c) 75 RT (d) 5.5 RT
- Q 9. A gas mixture consists of 2 moles of oxygen and 4 moles of Argon at temperature T. Neglecting all vibrational modes, the total internal energy of the system is: (Neglecting all vibrational modes)
- (a) 4 RT (b) 9 RT  
(c) 11 RT (d) 15 RT
- Q 10. Plot a graph between internal energy U and Temperature (T) of an ideal gas

- Q 11. Internal energy of  $n_1$  moles of  $H_2$  at temperature T is equal to the internal energy of  $n_2$  moles of He at temperature 2T. Then the ratio  $\frac{n_1}{n_2}$  is:
- (a) 3/5 (b) 2/3  
(c) 6/5 (d) 3/7
- Q 12. If heat is supplied to an ideal gas in an isothermal process
- (a) the internal energy of the gas will increase  
(b) the gas will do positive work  
(c) the gas will do negative work  
(d) the given process is not possible
- Q 13. Find the change in internal energy in joule when 20 gm of a gas is heated from 20°C to 30°C at constant volume ( $C_V = 0.18 \text{ Kcal/kg-K}$ )
- (a) 72.8 J (b) 151.2 J

(c) 302 J

(d) 450 J

Physics DPP- Solution**

**DPP- 2 Thermodynamics- Internal Energy & 1st Law  
of Thermodynamics**

**By Physicsaholics Team**

## Solution 1:

Internal energy is independent of volume and depends on the temperature only.

PRATEEK JAIN  
PHYSICSAHOLICS

Solution 2:

$$U = \frac{f}{2} nRT$$

when  $n$  &  $T$  are constant

$$U \propto f$$

here

$$f_{\text{NH}_3} > f_{\text{O}_2} > f_{\text{He}}$$

$$\text{so; } U_{\text{NH}_3} > U_{\text{O}_2} > U_{\text{He}}$$

$$\text{from graph } \Rightarrow U_3 > U_2 > U_1$$

so; for internal energy, graph 1, 2, 3 are for He, O<sub>2</sub> & NH<sub>3</sub>

Ans. a

Solution 3:

from first law of Thermodynamics

$$dQ = \Delta U + dW$$

$$dQ = Q$$

$$dW = W$$

then

$$Q = \Delta U \neq W$$

$$\Delta U = Q - W$$

Ans. b

Solution 4:

$$dQ = \Delta U + dW$$

heat supplied to the system  $dQ = 50 \text{ J}$

work done by the system  $dW = 16 \text{ J}$

So,

$$50 = \Delta U + 16$$

$$\Delta U = 34 \text{ J}$$

PRATEEK JAIN  
PHYSICSAHOLICS

Ans. c

Solution 5:

$$dQ = \Delta U + dW$$

Change in internal energy  $\Delta U = 17 \text{ J}$

work done on the system  $dW = -41 \text{ J}$

So,

$$dQ = 17 - 41$$

$$dQ = -24 \text{ J}$$

PRATEEK JAIN  
PHYSICSAHOLICS

Ans. b

Solution 6:

It is concerned with the conservation law of energy.

PRATEEK JAIN  
PHYSICSAHOLICS

Ans. b

Solution 7:

Translational energy = ~~not~~

$$U_k = \frac{f_k}{2} nRT \quad \text{--- (1)}$$

Rotational kinetic energy =  $U_R$

$$U_R = \frac{f_R}{2} nRT$$

$$\frac{U_k}{U_R} = \frac{f_k}{f_R} = \frac{3}{2}$$

means;  $f_k = 3$

&  $f_R = 2$

$$f = 2 + 3 = 5$$

$$U = \frac{f}{2} nRT$$

$$U = \frac{5}{2} \times 1 \times 8.3 \times 100$$

$$U = 2075 \text{ J}$$

Ans. c

Solution 8:

$H_2$  gas - diatomic

$$f = 5$$

$$U = \frac{f}{2} n R T$$

$$U = \frac{5}{2} \times 3 \times R T$$

$$U = \frac{15}{2} R T$$

$$U = 7.5 R T$$

Ans. a

Solution 9:

$O_2$  gas 2 mole

Argon gas 4 mole

$$f = 5$$

$$f = 3$$

$$U_1 = \frac{5}{2} \times 2RT$$

$$U_2 = \frac{3}{2} \times 4RT$$

$$U_1 = 5RT$$

$$U_2 = 6RT$$

$$U = U_1 + U_2$$

$$U = 5RT + 6RT$$

$$\boxed{U = 11RT}$$

Ans. c

Solution 10:

$$U = \frac{f}{2} nRT$$
$$U \propto T$$

Ans. a

Solution 11:

for  $H_2$  at  $(T)$  1 moles  $n_1$

$$U_1 = \frac{5}{2} n_1 R T$$

for He at  $(2T)$  1 moles  $n_2$

$$U_2 = \frac{3}{2} n_2 R (2T)$$

$$U_1 = U_2$$

$$\frac{5}{2} n_1 R T = \frac{3}{2} n_2 R (2T)$$

$$\frac{5}{2} n_1 = 3 n_2$$

$$\boxed{\frac{n_1}{n_2} = \frac{6}{5}}$$

Ans. c

Solution 12:

$$dq = \Delta U + dw$$

$$\Delta U = dq - dw$$

$$dq = \Delta U + dw$$

$$\Delta U = 0 \quad (\because T = \text{constant})$$

$$dq = dw$$

Heat is given to system  $\Rightarrow dq = +ve$

$$\Rightarrow dw = +ve$$

Ans. b

### Solution 13:

at constant volume

$$\Delta U = n C_v \Delta T$$

when  $C_v$  is in  $\text{cal/mol}^\circ\text{C}$

and  $\Delta U = m C_v \Delta T$

when  $C_v$  is in  $\text{cal/kg}^\circ\text{C}$

given;  $C_v = 0.18 \text{ Kcal/kg}^\circ\text{C}$

$$m = 20 \text{ gm} = 20 \times 10^{-3} \text{ kg}$$

$$\therefore \Delta U = (20 \times 10^{-3}) \times (0.18) \times 10 \text{ Kcal}$$

$$\Delta U = 3.6 \times 10^{-3} \times 10 \text{ Kcal}$$

$$\Delta U = 3.6 \times 10^{-2} \text{ Kcal}$$

$$\Delta U = 0.036 \text{ Kcal}$$

$$1 \text{ cal} = 4.2 \text{ Joule}$$

$$1 \text{ Kcal} = 4200 \text{ Joule}$$

$$\therefore \Delta U = 0.036 \times 4200$$

$$\Delta U = 3.6 \times 42$$

$$\Delta U = 151.2 \text{ J} \text{ Ans.}$$
