- Q 1. A man standing on a road hold his umbrella at  $30^\circ$  with the vertical to keep the rain away. He throws the umbrella and starts running at 10 km/hr. He finds that raindrops are hitting his head vertically, the speed of raindrops with respect to the road will be:  
 (a) 10 km/hr (b) 20 km/hr  
 (c) 30 km/hr (d) 40 km/hr
- Q 2. Rain is falling with a speed of  $12\sqrt{2}$  m/s at angle of  $45^\circ$  with the vertical line. A man in glider going at a speed of  $u$  at an angle of  $37^\circ$  with respect to the ground. Find the speed of the glider so that rain appears to him falling vertically. Consider the motion of the glider and rain drops in the same vertical plane:

- (a) 15 m/s (b) 30 m/s  
 (c) 10 m/s (d) 20 m/s
- Q 3. A man is walking due east at the rate of 2 km/h. The rain appears to him to come down vertically at the rate of 2 km/h. The actual velocity and angle through which rain is falling with the vertical respectively are  
 (a)  $2\sqrt{2}$  km/h,  $45^\circ$  (b)  $\frac{1}{\sqrt{2}}$  km/h,  $30^\circ$   
 (c) 2 km/h,  $0^\circ$  (d) 2 km/h,  $90^\circ$
- Q 4. When a man moves down the inclined plane with a constant speed 5 m/s which makes an angle of  $37^\circ$  with the horizontal, he finds that the rain is falling vertically downward. When he moves up the same inclined plane with the same speed, he finds that the rain makes an angle  $\theta = \tan^{-1}\left(\frac{7}{8}\right)$  with the horizontal. The speed of the rain is:  
 (a)  $\sqrt{116}$  m/s (b)  $\sqrt{32}$  m/s  
 (c) 5 m/s (d)  $\sqrt{73}$  m/s
- Q 5. A stationary person observes that rain is falling vertically down at 30 km/hr. A cyclist is moving up on an inclined plane making an angle  $30^\circ$  with horizontal at 10 km/hr. In what direction should the cyclist hold his umbrella to prevent himself from rain?  
 (a) At an angle  $\tan^{-1}\left(\frac{\sqrt{2}}{7}\right)$  with the vertical.

- (b) At an angle  $\tan^{-1}\left(\frac{\sqrt{3}}{7}\right)$  with the horizontal  
(c) At an angle  $\tan^{-1}\left(\frac{\sqrt{3}}{7}\right)$  with the vertical  
(d) At an angle  $\tan^{-1}\left(\frac{\sqrt{2}}{7}\right)$  with the horizontal
- Q 6. Rain is falling vertically downwards with a speed of 4 km/h. A girl moves on a straight road with a velocity of 3 km/h. The apparent velocity of rain with respect to the girl is:  
(a) 3 km/h (b) 4 km/h  
(c) 5 km/h (d) 7 km/h
- Q 7. A man is cycling at 4 m/s On a horizontal road. To him, rain appears to fall at  $30^\circ$  from vertical. If he doubles his velocity, rain appears to fall at  $60^\circ$  to vertical. Find the velocity of the rain:  
(a) 4 m/s (b) 5 m/s  
(c) 6 m/s (d)  $4\sqrt{3}$  m/s
- Q 8. A man running on a horizontal road at 8 km/h finds the rain falling vertically. He increases his speed to 12 km/h and finds that the drops make angle  $30^\circ$  with the vertical. Angle of velocity of rain with vertical is:  
(a)  $\tan^{-1}\left(\frac{2}{\sqrt{3}}\right)$  (b)  $\tan^{-1}\left(\frac{\sqrt{3}}{2}\right)$   
(c)  $\tan^{-1}\left(\frac{\sqrt{5}}{3}\right)$  (d)  $\cos^{-1}\left(\frac{\sqrt{3}}{2}\right)$
- Q 9. A man holds an umbrella at  $30^\circ$  with the vertical to keep himself dry. Then he runs at a speed of 10 m/s, and find the raindrops to be hitting vertically. Study the following statements and find the correct options:  
(1) Velocity of rain w.r.t. Earth is 20 m/s  
(2) Velocity of rain w.r.t. man is  $10\sqrt{3}$  m/s  
(3) Velocity of rain w.r.t. Earth is 30 m/s  
(4) Velocity of rain w.r.t. man is  $10\sqrt{2}$  m/s  
(a) Statement (2) and (3) are correct.  
(b) Statement (1) and (2) are correct.  
(c) Statement (3) and (4) are correct.  
(d) Statement (2) and (4) are correct.
- Q 10. The path of one projectile as seen from another projectile is a:  
(a) Straight line (b) Parabola  
(c) Hyperbola (d) Circle

# Written Solution

**DPP-9 Relative motion (Rain-Man problems)**

**By Physicsaholics Team**

Solution.1

if rain drops are falling vertically  
w.r.t. man

then; relative velocity in horizontal  
dir<sup>n</sup> = 0

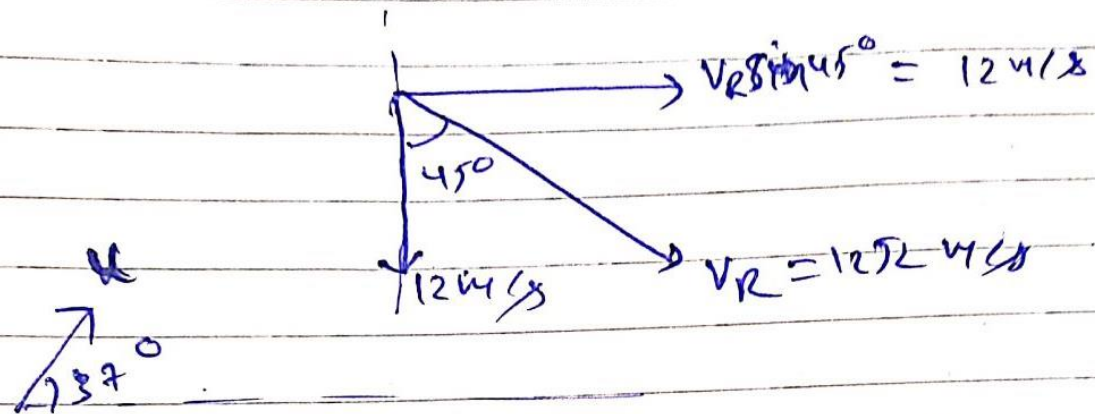

$$\therefore V_{\text{man}} = V_R \sin 30^\circ$$

$$10 = V_R \left(\frac{1}{2}\right)$$

$$\boxed{V_R = 20 \text{ km/hr}}$$

Ans.b

Solution.2

$$\vec{u}_g = u_x \hat{i} + u_y \hat{j} = (u \cos 37^\circ) \hat{i} + (u \sin 37^\circ) \hat{j}$$

$$\vec{u}_g = \frac{4u}{5} \hat{i} + \frac{3u}{5} \hat{j}$$

$$\vec{v}_R = 12 \hat{i} + 12 \hat{j} = v_x \hat{i} + v_y \hat{j}$$

velocity of Rain w.r.t. glider.

$$\vec{v}_{R/g} = \vec{v}_R - \vec{u}_g = \left(12 - \frac{4u}{5}\right) \hat{i} + \left(12 - \frac{3u}{5}\right) \hat{j}$$

if  $\vec{v}_{R/g}$  is vertical

$\therefore$  component of  $\hat{i}$  or  $\hat{j} = 0$

$$12 - \frac{4u}{5} = 0 \Rightarrow \boxed{u = 15 \text{ m/s}}$$

Ans.a

Solution.3

$$\int_0 \vec{v}_{R/M} = u \hat{j}$$

Velocity of man w.r.t. ground

$$\vec{v}_m = v \hat{j} = 2 \text{ km/h } (\hat{j})$$

Velocity of Rain w.r.t. man.

$$\vec{v}_{R/m} = u(\hat{j}) = 2 \text{ km/h } (-\hat{j})$$

$$\vec{v}_{R/m} = \vec{v}_R - \vec{v}_m$$

$$\vec{v}_R = \vec{v}_{R/m} + \vec{v}_m$$

$$\vec{v}_R = -2\hat{j} + 2\hat{j}$$

$$\text{for } \theta = \tan^{-1}\left(\frac{2}{2}\right) = \tan^{-1}(1)$$

$$\boxed{\theta = 45^\circ}$$

$$v_R = \sqrt{2^2 + 2^2} = 2\sqrt{2} \text{ km/h.}$$

$$\boxed{v_R = 2\sqrt{2} \text{ km/h}}$$

Ans.a

when moving down to incline:

Solution.4

$$\vec{v}_m = v_m \sin 37^\circ (-\hat{i}) + v_m \cos 37^\circ (-\hat{j})$$

$$\vec{v}_m = 5 \sin 37^\circ (-\hat{i}) + 5 \cos 37^\circ (-\hat{j})$$

$$\boxed{\vec{v}_m = -4\hat{i} - 3\hat{j}}$$

Let velocity of Rain w.r.t. ground

$$\vec{v}_R = v_x \hat{i} + v_y \hat{j}$$

if man observes rain falling vertical

∴ relative velocity of rain w.r.t. man is in  $\hat{j}$

$$\vec{v}_{R/m} = (v_x - (-4))\hat{i} + (v_y - (-3))\hat{j}$$

in x-dir  $\Rightarrow v_{rel} = 0$

$$\boxed{v_x - (-4) = 0}$$
$$\boxed{v_x = -4\hat{i}}$$

when going up to incline

$$\vec{v}_m = 5 \cos 37^\circ \hat{i} + 5 \sin 37^\circ \hat{j}$$

$$\boxed{\vec{v}_m = 4\hat{i} + 3\hat{j}}$$

$$\vec{v}_R = v_x \hat{i} + v_y \hat{j}$$

$$\vec{v}_R = -4\hat{i} + v_y \hat{j}$$

$$\vec{v}_{R/m} = (-4-4)\hat{i} + (v_y-3)\hat{j}$$

$$\tan \theta = \frac{v_y - 3}{-8} = \frac{7}{8}$$

$$v_y - 3 = -7 \Rightarrow v_y = -4 \text{ m/s}$$

$$\boxed{\vec{v}_y = -4\hat{j}}$$

$$\vec{v}_R = v_x \hat{i} + v_y \hat{j}$$

$$\boxed{\vec{v}_R = -4\hat{i} - 4\hat{j}}$$

$$v = \sqrt{4^2 + 4^2} = \sqrt{32}$$

$$\boxed{v = \sqrt{32} \text{ m/s}}$$

Ans.b

## Solution.5

$$\vec{V}_R = -30\hat{j} \text{ (km/h)}$$

$$\vec{V}_m = (10 \cos 30^\circ)\hat{i} + (10 \sin 30^\circ)\hat{j}$$

$$\vec{V}_m = 5\sqrt{3}\hat{i} + 5\hat{j}$$

$$\vec{V}_{R/m} = \vec{V}_R - \vec{V}_m$$

$$= -30\hat{j} - 5\sqrt{3}\hat{i} - 5\hat{j}$$

$$\vec{V}_{R/m} = -5\sqrt{3}\hat{i} - (30+5)\hat{j}$$

$$\vec{V}_{R/m} = -5\sqrt{3}\hat{i} - 35\hat{j}$$

Angle from vertical  $\Rightarrow \theta = \tan^{-1} \left( \frac{5\sqrt{3}}{35} \right)$

$$\theta = \tan^{-1} \frac{\sqrt{3}}{7}$$

Ans.c

## Solution.6

$$\vec{v}_R = -4\hat{j} \text{ (cm/h)}$$

$$\vec{v}_G = 3\hat{i} \text{ (cm/h)}$$

$$\vec{v}_{R/G} = \vec{v}_R - \vec{v}_G$$

$$\vec{v}_{R/G} = -4\hat{j} - 3\hat{i} = -3\hat{i} - 4\hat{j}$$

$$|v_{R/G}| = 5 \text{ cm/h}$$

Ans.c

Solution.7  $\vec{V}_{r,g} = v_1 \leftarrow \downarrow v_2$  ,  $\vec{V}_{m,g} \text{ (initial)} = \xrightarrow{4 \text{ m/Sec}}$

initial velocity of rain w.r.t. man

$$\tan 30^\circ = \frac{v_1+4}{v_2} = \frac{1}{\sqrt{3}}$$

final ,, ,, ,, ,, ,,

$$\tan 60^\circ = \frac{v_1+8}{v_2} = \sqrt{3}$$

$$\Rightarrow \frac{v_1+4}{v_1+8} = \frac{1}{3} \Rightarrow 3v_1+12 = v_1+8 \Rightarrow 2v_1 = -4 \Rightarrow v_1 = -2$$

$$v_2 = \sqrt{3}(v_1+4) = 2\sqrt{3} \Rightarrow |\vec{V}_{r,g}| = \sqrt{v_1^2 + v_2^2} = 4 \text{ m/Sec}$$

$$V_R = 4 \text{ m/s}$$

Ans.a

## Solution.8

$$\vec{v}_{m_j} = 8 \hat{i} \text{ (km/h)}$$

$$\vec{v}_R = v_x \hat{i} + v_y \hat{j}$$

$$\vec{v}_{R/m} = (v_x - 8) \hat{i} + v_y \hat{j}$$

$\vec{v}_{R/m}$  is vertical

then  $v_x - 8 = 0 \Rightarrow \boxed{v_x = 8 \text{ km/h}}$

Now when  $\vec{v}_{m_j} = 12 \hat{j}$

$$\vec{v}_{R/m} = (v_x - 12) \hat{i} + v_y \hat{j}$$

$\theta = 30^\circ$  with vertical

$$\tan 30^\circ = \frac{v_x - 12}{v_y} = \frac{1}{\sqrt{3}}$$

$$\boxed{v_y = -4\sqrt{3} \text{ km/h}}$$

$$\boxed{\vec{v}_R = 8 \hat{i} - 4\sqrt{3} \hat{j}} \quad v_R = \sqrt{8^2 + (4\sqrt{3})^2}$$

$$\tan \alpha = \frac{8}{4\sqrt{3}} = \frac{2}{\sqrt{3}} \Rightarrow \alpha = \tan^{-1}\left(\frac{2}{\sqrt{3}}\right)$$

with vertical.

Ans.a

Solution.9

initially  $v_m = 0$

$$\therefore v_{r/m} = v_r ; \vec{v}_r = v_x \hat{i} + v_y \hat{j}$$

$$v_x = v_r \sin 30^\circ ; v_y = v_r \cos 30^\circ$$

Now

$$\vec{v}_m = 10 \text{ m/s } \hat{j}$$

$$\vec{v}_{r/m} = (v_x - 10) \hat{i} + v_y \hat{j}$$

if  $\vec{v}_{r/m}$  is vertical

$$\text{then } v_x - 10 = 0$$

$$v_x = 10$$

$$v_r \sin 30^\circ = 10$$

$$\boxed{v_r = 20 \text{ m/s}}$$

↳ velocity of rain w.r.t. Earth.

w.r.t. man.

$$\vec{v}_{r/m} = v_y \hat{j}$$

$$v_y = v_r \cos 30^\circ = 20 \times \frac{\sqrt{3}}{2} = 10\sqrt{3} \text{ m/s}$$

$$\vec{v}_{r/m} = (10\hat{i} + 10\sqrt{3}\hat{j}) - (10\hat{j})$$

$$\vec{v}_{r/m} = 10\sqrt{3} \hat{j}$$

$$\boxed{v_{r/m} = 10\sqrt{3} \text{ m/s}}$$

Ans.b

Solution.10

$$\vec{v}_A = (u_A \cos \alpha) \hat{i} + (u_A \sin \alpha - gt) \hat{j}$$

$$\vec{v}_B = (u_B \cos \beta) \hat{i} + (u_B \sin \beta - gt) \hat{j}$$

$$\boxed{\vec{v}_{A/B} = (u_A \cos \alpha - u_B \cos \beta) \hat{i} + (u_A \sin \alpha - u_B \sin \beta) \hat{j}}$$

$$\vec{v}_{A/B} = \text{constant}$$

$$\therefore \vec{a}_{A/B} = (-g\hat{j}) - (-g\hat{j}) = 0$$

$\therefore$  Path - straight line
